## Across

- Sulphur and nitrogen \_\_\_\_\_ cause acid rain.[6]
- CFC's destroy the \_\_\_\_\_ layer of the atmosphere.[5]
- Type of energy resource that is abundant and reusable.[9]
- Another name for Global Warming is \_\_\_\_\_ Effect.[10]
- Can be broken down by decomposers to harmless substances.[13]
- Type of petrol that causes less pollution.[8]
- Gas produced by burning trees is carbon \_\_\_\_\_.[7]
- Coal, oil and natural gas are \_\_\_\_\_ fuels.[6]

## Down

- Form of renewable energy that is well suited to the Australian climate.[5]
- Unit used to measure energy.[5]
- Ability to do work.[6]
- Acid \_\_\_\_\_ is an environmental problem in industrial areas.[4]
- Abbreviation of Liquefied Petroleum Gas.[3]
- All domestic waste water[6]
- Chemicals in detergents and fertilisers that cause eutrophication.[10]
- Gas that increases global temperatures.[7]
- Abbreviation for chlorofluorocarbon.[3]
